INVITATION TO ATTEND WEBINAR

OPRA Turbines is a leading developer and manufacturer of advanced radial gas turbines and gas turbine powered generator sets utilized for industrial and oil & gas applications. We are pleased to invite you to join our webinar on combined heat and power (CHP) in the dairy industry. Register to hear about the technology from OPRA Turbines with case studies and feasibility studies from Application Engineers. Familiarize yourself with smaller gas turbine technology and gain ideas and solutions for cogeneration at dairy plants. You are welcome to pass on this invite to anyone you feel might find this interesting.

The OP16 Gas Turbine and Cogeneration at Dairy Plants
Feasibility studies and a case study on the benefits of installing CHP in the dairy industry

Date: Wednesday, January 20, 2016
Duration: 45 minutes
Price: Complimentary
Presenters: Anshuman Pandey (Application Engineer)
Ahmet Yöntem (Lead Application Engineer)
Time: The presentation will be held twice for different time zones. Please select the time that suits you best.

SESSION 1
Amsterdam 10.00AM
New York 4.00AM
Jakarta 3.00PM
Click here to register for Session 1
Password: OP16session1

SESSION 2
Amsterdam 5.00PM
New York 11.00AM
Jakarta 10.00PM
Click here to register for Session 2
Password: OP16session2

Key learning objectives:
- Learn about CHP at dairy plants, exemplified by a case study and feasibility studies.
- Learn about the advantages of combined heat and power (CHP).
- Learn about the basic layout of a CHP system and options for the use of the exhaust heat.
- Learn about fuel flexible and clean gas turbine power.
- Learn about the advantages of CHP with the OP16 gas turbine for the dairy industry.

There will also be a live Q&A at the conclusion of the presentation. For more information please don’t hesitate to send an email to webinar@opraturbines.com.
