White House Issues Executive Order in Support of Combined Heat and Power (CHP)

WASHINGTON, DC -- Today President Obama signed an Executive Order calling for the deployment of 40 gigawatts of new, cost-effective industrial combined heat and power (CHP) capacity in the United States by 2020.

The World Alliance for Decentralized Energy (WADE) applauds the Administration for its support of CHP and for recognizing the great promise of clean and efficient decentralized energy solutions. According to WADE Chairman, Steve Zilonis, “energy efficient technologies, such as CHP, can help improve the economy and the environment while supporting job growth in the manufacturing sector and reducing our reliance on foreign fuels.”

About WADE: The World Alliance for Decentralized Energy (WADE) was established in 1997 as a non-profit research and promotion organization whose mission is to accelerate the worldwide development of high efficiency cogeneration (CHP) and decentralized energy systems that deliver substantial economic and environmental benefits.
